

Dart Report 3 June 2012

West Dart system was sent out to Dart due to being reported to not Boot up.

Dart tested for a week and sent it back, No Problem found.

When I received it, one Video board was out of slot, CPU fan was jammed up under the CD/DVD drive, and front covers were knocked loose.

I installed and screwed down the video card, reshaped and remounted the CPU fan assy, but I'm concerned about it being knocked loose again because the mount points were damaged. Reinstalled front cover and made a spacer at rear of CPU box to keep it forward in cabinet to protect the connectors.

I power it up and aligned the camera to the projector and tested all the guns, including my spare at home.

Carl and I coordinated moving the system back and forth to the West. Scheduled to be used this weekend and the next couple.

At last Meeting, it was reported that some of the East system guns didn't shoot all the time. Haven't gotten the problems guns or any more feedback.
